

Ramen Quest

Uriel Montes and John Villalvazo
CSE-111 Database Systems, Fall 2020, UCM

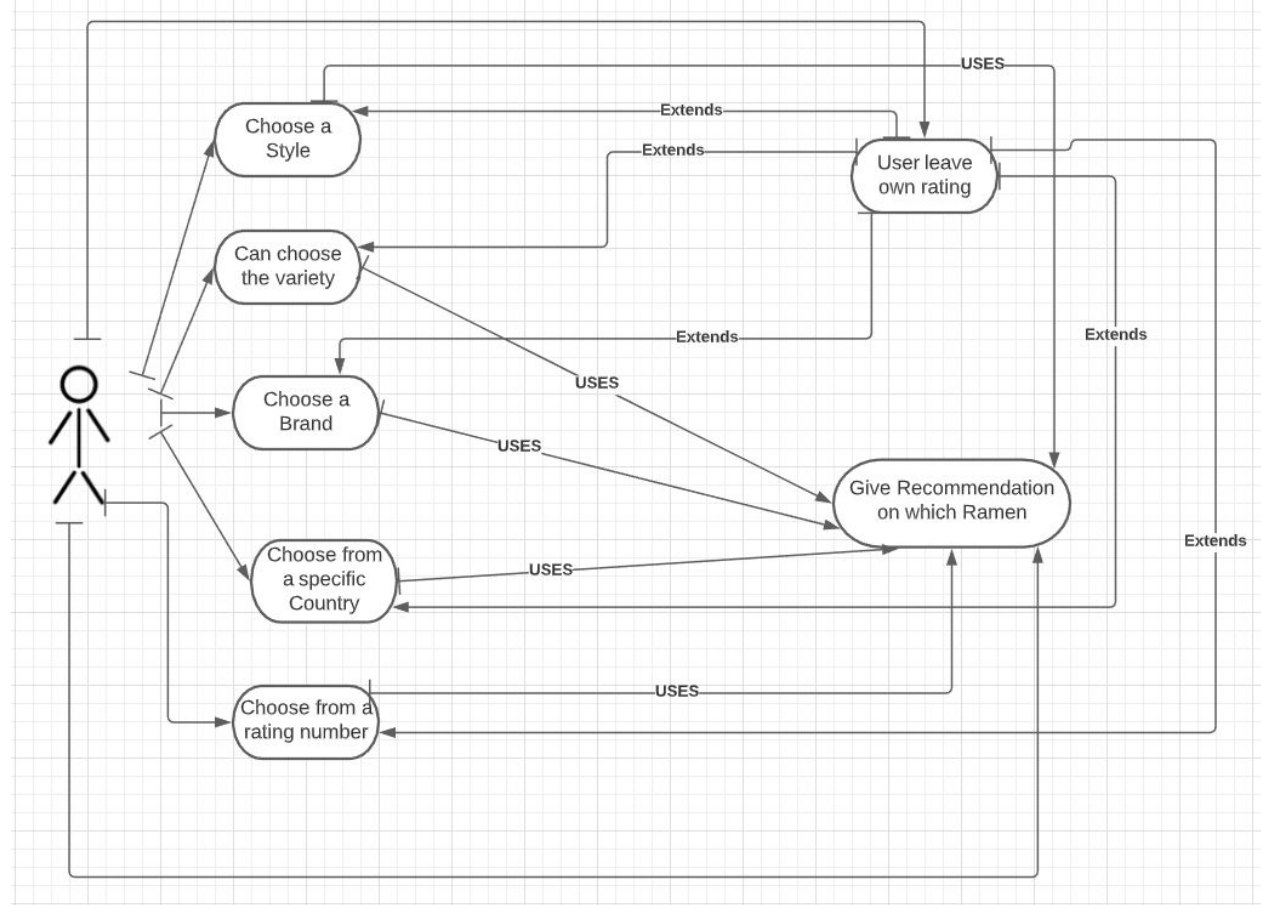

Implementation

- The use of phpAdmin and mySQL to host our application as well as have visuals for the user
- Will be a learning process for both partners as this software was recommended by others
- Still working out how implement within these software, but have been told that visually will help user go through database

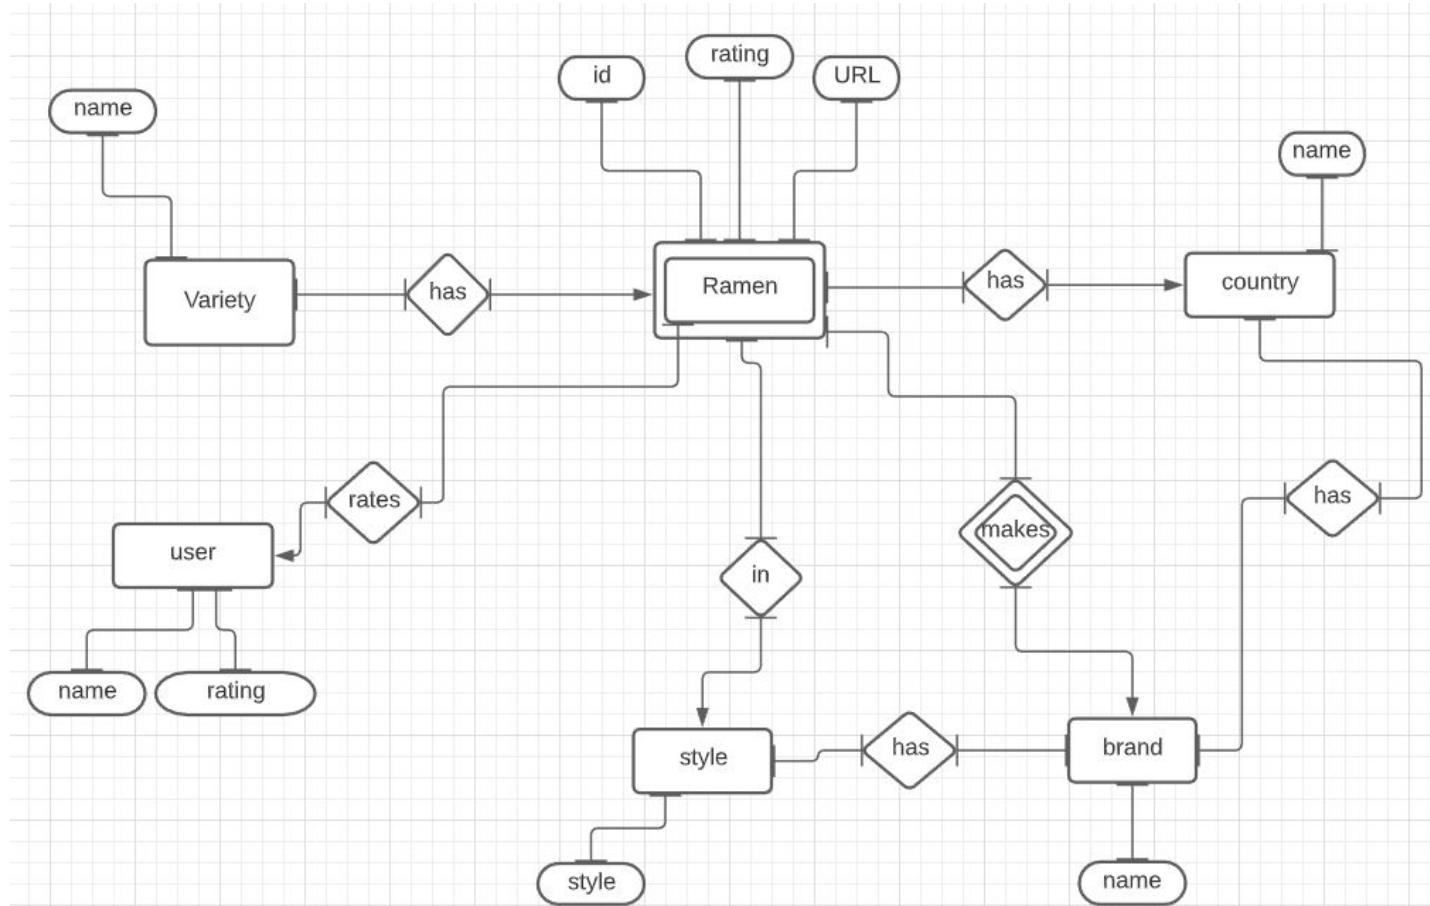

System Description

- A system that will give users recommendations of Ramen to try (with constraints or no constraints)
- Be able to search up the different types of Ramen that are offered by specific attributes
- Be able to find a Ramen that fits their wants along with a URL to a reviewer with more detail
- Be able to leave a review on a specific type of Ramen themselves
